21 June 2006

Released Fish Survival for Fisheries Management

The latest in the series of products promoting best practices in releasing fish is a brochure providing information on fish survival that is an aid for fisheries management. The brochure outlines the information needed to make informed decisions when considering management of recreational fisheries.

The brochure also includes the latest information on survival rates of key species obtained through research carried out over the last few years.

Copies of the brochure or any other Released Fish Survival products can be obtained from Infofish Services by contacting Shirley Sawynok on 07-4928-6133 or at shirleys@zbc.com.net.

Results of NSW research feature in Fishing World

The June and July editions of Fishing World will feature the results of research into Bream survival by the NSW DPI team led by Matt Broadhurst. This is the latest information from a series of projects looking at survival of key species in NSW including Snapper, Whiting, Trevally and Mulloway.

The promotion of the results of recreational fishing research projects in fishing magazines ensures that the information gets out there quickly to those fishers that need to be aware of the latest information. Jim Harwell, Fishing World editor, has been very supportive of the Released Fish Survival program.
