Tag	J63252	
Species	Small Mouth Sea Perch ( <i>Lutjanus erthyropterus</i> )	
Date	29/9/99	31/12/99
Length	350mm	410mm
Location	Conn Ck	Off Mourilyan Harbour
Fisher	John Dunn	Ron Williams
Days Out	93	
Growth	60mm	
Movement	95km north along coast	

This fish has also been recaptured twice. Howard Oellermann first caught the fish on 23/10/99 at the same place it was tagged. So it actually moved over the distance in a maximum of 69 days. The growth shown for this fish may be exaggerated. It is likely that on recapture the tail was flattened to achieve maximum length (legal length is 400mm) while on tagging the natural length was taken.
